

A Empirical surrogate-evaluation funnel

moments	fitted	PASS	PASS after repair	PASS, performed
centers	fitted	PASS	STOP: feature gap	not performed
intervals	fitted	PASS	STOP: noncompressible	not performed

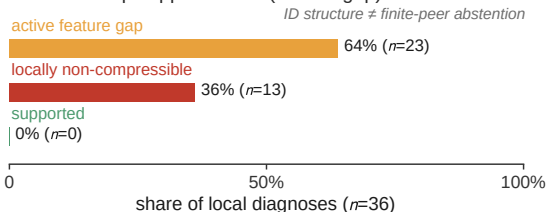

Moments localized regime error was diagnosed by replay and repaired prospectively.
Centers and intervals stop rules were prespecified.

B Histogram encodings: field-grouped in-domain OOF evidence

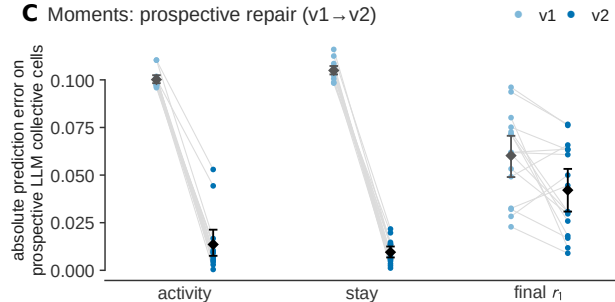

moments: in-domain criteria met under its own prespecified gates
(no peer-global ΔLL row in this table)

D Centers: closed-loop support failure (feature gap)

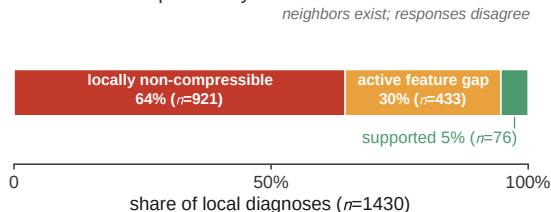

ID structure + finite-peer abstention

C Moments: prospective repair (v1 → v2)

E Intervals: local noncompressibility

neighbors exist; responses disagree

F Final disposition

moments collective path frozen

centers stopped; microscopic archive

intervals stopped; microscopic archive

compressibility PASS does not guarantee prospective eligibility
