

A Prespecified replication gates

Prespecified R1 gate

$n = 16$ responses per field $\times$ encoding

Target-encoding effect, $p < 0.05$

Between-encoding > within-block

Between – within > 0, $p < 0.05$

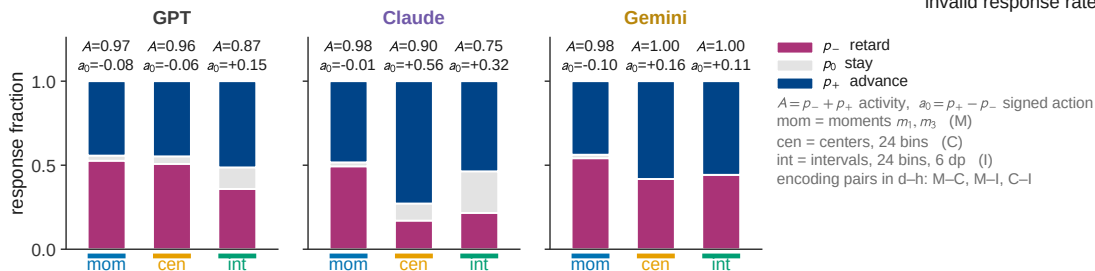

≥ 2 of 3 pairs above noise

Valid rate and target skew in gate

Replication verdict

GPT	Claude	Gemini
4 608 calls	2 304 calls	2 304 calls

pass	pass	pass
pass	pass	pass
PASS	PASS	PASS

C Response trinomials by presented encoding

D GPT fieldwise sensitivity

E Claude fieldwise sensitivity

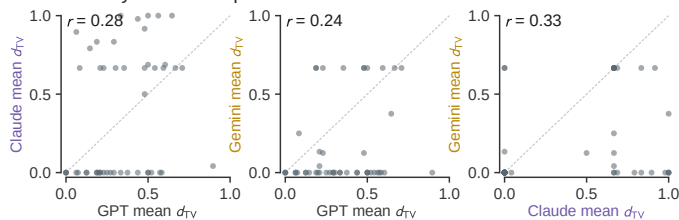

F Gemini fieldwise sensitivity

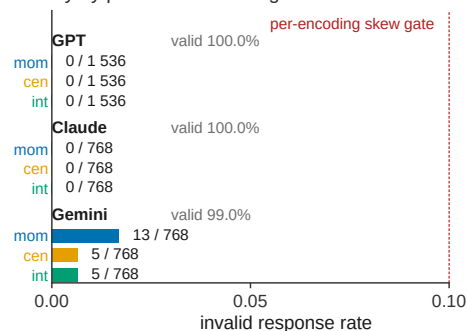

48 physical fields, 8 per stratum, identical order in the three strips

G Cross-family field correspondence

B Validity by presented encoding

H Pairwise d_{TV} and noise floor
