

a Claude matched replication design

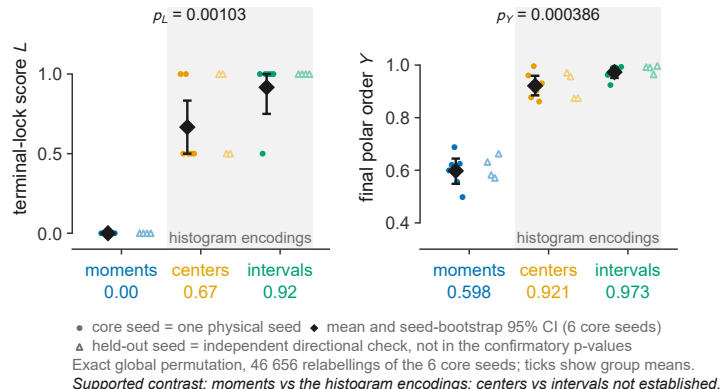

b Claude collective trajectories

c Claude phenotype matrix

d Does encoding affect locking in Claude?

e GPT–Claude matched macro map

the encoding-to-locking map reverses

6 matched seed-index blocks, $K > 0$ · cell text = polar-lock runs

secondary matched summary $\Delta_{M-H} = Y_M - (Y_C + Y_I)/2$

GPT +0.42 · Claude -0.35

f Three-family microscopic operator replication
