

post-onset

stratum: all 8 locked physical fields, three presented encodings each

p_{-} retard p_0 stay p_{+} advance

Stacks: empirical trinomial over 32 replays per (field, presented encoding); ticks mom / cen / int = moments / centers / intervals. Brackets: pairwise d_{TV} .

Locked selection predicate: within 10 steps after first $r_1 \geq 0.5$; else high-activity mid-run.
